'Innovative software that works'

CHARTERS MODULE

The Primeworks .Net Charters system is an innovative reservations program, used to record and manage your Charter bookings.

1) Potential bookings are created in the **Single Quotations** program

2) Once the quotation information is completed, a Quotation can then be printed and mailed to the client or if the client has an email address, the quotation can then be emailed to the client instead. If you have your own website and an online booking form, we have an API (Application Program Interface) that will accept quotation from your online bookings**.** When the client accepts the quotation, the quotation can then be transferred to the **Single Bookings**.

3) Detail drop and pickup times can now be set to include when the driver/vehicle must leave the depot and when the driver/vehicle return to the depot.

- A booking confirmation for the client may also be printed.
- A daily booking report may be printed out in advance, allowing you to allocate drivers and vehicles to the charters
- Invoices can be printed/emailed by nominated range of days or job
- Revenue reports for a particular day, or a range of dates, may also be produced. These revenue reports can be for any or all vehicle types for specified tour codes, debtors, vehicles, drivers or sub-contractors.
