'Innovative software that works'

SHIFTS & ROSTERS

The Primeworks .Net Shifts & Rosters system is an efficient, easy to use rostering program specially designed to aid bus operators to schedule their shifts and alerts them when drivers or vehicles become unavailable to cover a shift. Ultimately the actual shifts a driver works during a week will form a roster that can be transferred to the Primeworks .Net Payroll system through an award interpreter that will pay the driver correctly and efficiently.

The Primeworks .Net Shifts & Rosters system utilises state of the art drag and drop techniques to graphically illustrate the allocation of shifts to rosters and the assignment and swapping of rosters between drivers.

The Master Shifts and Master Rosters, or template for shifts and rosters, can be easily imported from scheduling systems such as Hastus or Austrics. To allow for better planning and easier operation, four sets of master rosters are allowed. Two sets for current rosters that are used to populate weekly rosters when new weeks are created for school days and school holidays. The other two sets of rosters will cut in and replace the current sets of rosters when the nominated start roster Date is reached.

There are numerous listings and report to help planning for the day, the week or weeks in advance. Exceptional reports will help to identify shifts that are duplicated, worked outside their schedule start/finish or meal time. Comments when shifts are split or leave/earnings given to drivers hence the integrity of the system.
