'Innovative software that works'

VEHICLE MAINTENANCE

The PrimeWorks .NET Vehicle Maintenance module is a system designed to record your company vehicles' oil and fuel usage, repair and maintenance costs and service due. It also accumulates and reports on all necessary statistical information regarding overall fleet performance, in order for you to control costs more effectively.

The PrimeWorks .NET Vehicle Maintenance module is a re-write and platform upgrade of the "Dataspeed Bus Maintenance" module, which was one of the very first and most widely used Bus Maintenance programs for the Australian Bus & Coach Industry, over the past 30 years. The PrimeWorks system inherits the Dataspeed intellectual property and operates on a modern .NET platform with a cloud hosted facility. PrimeWorks is thereby ensuring continuity for the NSW Bus Industry.

Standard Features of the new system include:-

- Facility for staff to enter defects using a mobile device
- Seemless ability to transfer vehicles from one depot to another within one group
- Integration to a third party management system (eg. Datafuel)
- Tyre Recording system
- Job Card system for services
- Ability for system administrator to roll back data entries (E.g. Fuel, Services, Month End Resets)
