*'Innovative software that works'*

# STOCK & INVENTORY MODULE

The Primeworks Stock & Inventory system can be fully integrated into our Vehicle Maintenance and/or Creditors and/or General Ledger systems. Key features include:

- A Purchase Orders program to place orders on a supplier.
- Direct Purchase Orders to place an order specifically on a job for a vehicle.
- Order Received when orders are wholly or partly received. Picking lists can be produced at this time.
- Order Invoices when the order is received (when the system is integrated to our Creditors system). Can invoice part of orders which have been received.
- Self-generated Bar Code for each stock item to be printed when orders are received, during stocktake or when processing the maintenance details of a vehicle. Ability to use the PrimeWorks app to scan bar code.
- Capable of part or whole store stocktake. Easy logical way to process stocktakes manually or use app to record stock quantity by scanning barcodes.
- Use average buying price to value stock. Each stock record stores every purchase, adjustment, and usage transactions. It also keeps all previous months' movements in purchase, adjustment, and usage.
- Abundance of various reports for stock movement, on order, obsolescence, re-order etc. etc.
